Risk and Reward Profile

Lower risk ← Higher risk
Typically lower rewards Typically higher rewards

1	2	3	4	5	6	7
---	---	---	---	---	---	---

The risk category was calculated using historical performance data. The risk category may not be a reliable indication of the future risk profile of the fund, is not guaranteed and may change over time. The lowest category does not mean a "risk free" investment. The risk and reward profile is classified by the level of historical fluctuation of the Net Asset Values of the share class, and within this classification, categories 1-2 indicate a low level of historical fluctuations, 3-5 a medium level and 6-7 a high level.

At this time, the level of the risk and reward profile is equal to 4, due to its historic volatility.

The following risks may be materially relevant for the Sub-Fund and may not be adequately captured by the above indicator:

- **Emerging Market Risk** – investing in emerging markets may result in increased volatility and lack of liquidity. Also, the legal, political, judicial and regulatory frameworks are still developing so there could be, for local market participants and their counterparties, a high degree of uncertainty.
- **Credit Risk** – potential or actual credit profile downgrades may increase the level of perceived risk.
- **Interest Rate Risk** – the risk that an investment's value will change due to a change of interest rates.
- **Investment in Debt Securities** - The Net Asset Value of a fund invested in debt instruments will change in response to fluctuations in interest rates, perceived credit quality of the issuer, market liquidity and also currency exchange rates (when the currency of the investment is other than the base currency of the fund holding that investment).
